EDUCATION

KIET Group of Institutions

B.Tech in Information Technology

2024 – 2028

Ghaziabad, UP, India

CGPA: 8.17 | Coursework: Data Structures, Algorithms, OOP, Operating Systems, DBMS

PROFESSIONAL SUMMARY

Aspiring GenAI Engineer building LLM applications end to end with Python, FastAPI and Groq: structured outputs, streaming APIs, evaluation, security hardening and deployment. Built and deployed HireMeAI, a resume-grounded recruiter chatbot with a golden-set eval and 20 automated tests. Background in Android development (Kotlin, Jetpack Compose), 450+ DSA problems solved and 4 AWS certifications. Seeking a GenAI / Applied AI Engineer internship.

TECHNICAL SKILLS

Languages: Python, C++, Kotlin, Java

GenAI & LLMs: LLM APIs (Groq), Prompt Engineering, Structured Outputs (JSON Schema, Pydantic), Streaming, LLM Evaluation, Prompt-Injection Defense

Backend & Testing: FastAPI, REST APIs, pytest, uv

Cloud & DevOps: AWS (Lambda, API Gateway, SQS, DynamoDB, EC2, VPC), Terraform, Render, Git, GitHub

Android: Jetpack Compose, MVVM, Clean Architecture, Hilt, Room, Retrofit, Coroutines, Kotlin Flow, Firebase Auth

PROJECTS

HireMeAI — AI Recruiter Chatbot

[Live Demo →](#) | [Code →](#)

Python · FastAPI · Groq (gpt-oss-120b) · Pydantic · React · pytest · Render

- Built a chatbot that answers recruiter questions only from my resume, with streamed responses; the resume is parsed once into a strict JSON schema and cached by a hash of file, prompt and model.
- Wrote a golden-set eval that caught silent data loss from schema gaps and a brittle post-processing filter; added 20 pytest tests with the LLM mocked, so they run free in about a second.
- Hardened it for public use: phone number withheld from the model, prompt-injection and XSS defenses, input caps, and per-IP plus global rate limiting after finding and fixing an X-Forwarded-For spoofing bypass.

MyRecipeApp — Recipe Browser Android Application

[View Project →](#)

Kotlin · Jetpack Compose · Retrofit · REST API · Spoonacular API

- Integrated Spoonacular REST API using Retrofit with structured error handling and JSON parsing across multiple endpoints.
- Designed features including recipe search, favorites, and an automated shopping list that aggregates ingredients from saved recipes.

Kometo — Food Delivery Android Application

[View Project →](#)

Kotlin · Jetpack Compose · Clean Architecture · Hilt · Firebase Auth · Material Design 3

- Developed a Zomato-inspired Android application with 8+ screens using Jetpack Compose, implementing type-safe navigation and reusable UI components for scalability.
- Integrated Firebase Authentication (Google Sign-In + Email) with persistent user sessions, ensuring reliable login experience across app restarts.

MyWishlist — Offline Wishlist Manager

[View Project →](#)

Kotlin · Jetpack Compose · Room Database · MVVM · Kotlin Flow

- Built a fully offline Android application using Room Database, supporting filtering, tagging, and search without network dependency.
- Implemented reactive UI using Kotlin Flow and StateFlow to deliver real-time updates without manual refresh.

PROBLEM SOLVING & ACHIEVEMENTS

- Solved **450+ DSA problems** on LeetCode, maintaining a 100+ day coding streak.
- National-level participant in Bharatiya Antariksh Hackathon 2025 organised by ISRO & Hack2Skill.

CERTIFICATIONS

- AWS Certified CloudOps Engineer – Associate** April 2026
- AWS Certified Data Engineer – Associate** April 2026
- AWS Certified AI Practitioner — Amazon Web Services** December 2025
- AWS Certified Cloud Practitioner — Amazon Web Services** December 2025
- Model United Nations (MUN) Participant — KIET Group of Institutions**
